

## TABLE OF CONTENTS

### Volume I:

#### General aspects

- Ferroalloy industry of Ukraine: current status, development trends and future prospects  
*Grishchenko S.G., Kutsin V.S., Kravchenko P.A., Soloshenko V.P., Bespalov O.L., Kudryavtsev S.L.* 1
- History and New milestones in submerged arc furnace technology for ferro alloy and silicon production  
*Fröhling C., Meyn M., Degel R., Niekerk A.van., Köneke M.* 7

#### PRODUCTION TECHNOLOGIES AND OPERATION

##### Presmelting Operations

- Technology improvement of refractory chromiteores clotting  
*Akberdin A., Kim A., Zinyakova O.* 17
- The development of fine manganese concentrate lumping technology at PJSC Nikopol Ferroalloy Plant  
*Kutsin V.S., Olshansky V.I., Filippov I.Yu., Chumakov A.A.* 22
- Resource saving in manganese ferroalloy production using low-grade manganese ore concentrates  
*Projdak Y. S., Myanovskaya Y. V.* 27
- Charge and briquettes properties for the production of aluminum-silicon alloys  
*Ovcharuk A.N., Taran A., Krivenko V.V., Mingsheng Y.* 32

##### Chromium Alloys Production and Operation

- Study of carbothermic reduction processes in the manufacture of high-carbon ferrochrome  
*Zayakin O.V., Zhuchkov V.I., Afanasyev V.I.* 39
- Vacuum-thermal method of deep refining of ferrochromium in solid state  
*Gasik M. I., Gasik M. M.* 44
- Implementation of Tenova pre-heating technology at JSC Kazchrome  
*Jonker A.P., Broadbent M.* 48
- High carbon ferrochromium operational manageability while diversifying products  
*Yavuzhan K.* 52
- Evaluation on heat and materials balance of CO<sub>2</sub> involved in converter process for M-LcFeCr production  
*Yu H. C., Wang H. J., XU Z. B.* 58

##### Manganese Alloys Production and Operation

- Mastering of ferrosilicon manganese melting with highly reactive reducing agent  
*Grishchenko S.G., Ovcharuk A.N., Olshansky V.I., Filippov I, Yu., Taran A.Yu., Chalenko V.I., Dudyak V.N., Pavlenko S.V.* 65
- Manganese ferroalloys production from Russian manganese ores  
*Dashevskiy V.Ya., Zhdanov A.V., Zhuchkov V.I., Leontyev L.I.* 73
- The use of fine water sprays to suppress fume when casting refined ferromanganese  
*Cowx P., Nordhagen R., Kadkhodabeigi M., Els L., Kero I.* 81
- The AlloyStream™ process for HCFEMn production  
*Muller J., Coetsee T., Groenewald J.A., Toit de A.A. and Zeelie D.* 91

Pretreatment unit in ferromanganese production  
*Tangstad M., Ichihara K., Ringdalen E.* 99

The determination of rational technological parameters of ferrosilicon manganese melting based on the process electrical characteristics  
*Kutsin V.S., Gladkikh V.A., Olshansky V.I., Filippov I.Yu., Kyzmenko S.N., Mikhal'yov A.I., Ruban A.V.* 107

## **Ferronickel, Ferrosilicon and other ferroalloys Production and Operation**

Study on slag resistance of refractories in submerged arc furnaces melting ferronickel  
*Dong Hu, Pei Xiao Liu, Shao Jun Chu* 115

Innovative electric smelter solutions of the SMS Group for the silicon industry  
*Degel R., Fröhling C., Kalisch M., Hecker E., Oterdoom H.* 122

Production of molybdenum-, nickel-, chromium-containing iron-based alloys via metallothermic process  
*Gungor M.N., Benzesik K., Bugdayci M., Yucel O.* 133

Ferromolybdenum production according to silicoaluminothermal method: high quality, chemical and granulometric composition stability  
*Kornievskiy V. N., Panchenko A. I., Logozinskiy I. N., Salnikov A. S., Gasik M. I., Shibeko P. A., Budnik I. L., Yakovitskiy A. V.* 139

Search for a new compositions of boron-containing ferroalloys, their application and development of appropriate production techniques  
*Zhuchkov V.I., Sychev A.V., Babenko A.A., Akberdin A.A., Kim A.S.* 145

A step change in calcium carbide production technology  
*McCaffrey M., Robinson S., Sizemore F., Kangmin X., Shiyun Z., Xiaojing Z., Shicheng L., Xiaowen J., Dengping Z.* 149

A 90 MW calcium carbide furnace – process and electrical scale-up  
*McCaffrey M., Kadar L., Dong J., Wasmund B., Robinson S., Wharton D.* 158

## **Post Taphole Operations**

Slag atomising technology: unlocking real value  
*Mostaghel S., Cramer M., Faucher S., So L., Lee S.K., Oh S.-Y.* 166

Towards computational modelling of multiphase flow in and around furnace tap-holes due to lancing with oxygen: an initial computational and cold-model validation study  
*Erwee M.W., Reynolds Q.G., Zietsman J.H., Cromarty R.D., Lexmond A.S.* 174

Sensor-based technology for ore and slag sorting  
*Gryshan D. and Kulish A.* 184

Laboratory study of slag metal separation for HC FeMn  
*Ringdalen E., Solheim I., Tang K., Eidem P-A., Ravary B.* 190

## **ENGINEERING ASPECTS AND CONCEPTS**

### **Furnace Design and Equipment**

Ilmenite Smelting in a Pilot Scale DC Furnace  
*Pisilä S., Palovaara P., Jong de A., Aula M.* 202

ESS smelting technology enabling FeNi smelting from limonite  
*Erasmus L., Fourie L.J.* 210

Rapid redesign and Restart of the Vale Onça Puma Nickel Smelter <i>Southall S., Zemanek A., Griebeler A., Stevens G., Emery B., Damasceno R.</i>	219
Construction and commissioning of ERAMET SiMn + EMM plant in Gabon <i>L'Huillier P.</i>	229
Intelligent solutions for ferroalloy production of Paul Wurth <i>Kappes H., Gantenberg M., Degel R., Kinzel K-P., Hoffmann M., Krüssmann M., Flammang M., Degel R.</i>	238
A 90 MW calcium carbide furnace – mechanical design <i>McCaffrey M., Ku H., Reid R., Robinson S., Sizemore F.</i>	247
<b>Lining</b>	
Refining of ferroalloys with the CLU® process <i>Beskow K., Rick C-J and Vesterberg P.</i>	256
RHI refractory solutions - a reliable partner for the ferroalloys industry <i>Wenzl C., Spanring A.</i>	264
Lining management - residual life assessment <i>Mohanty B.</i>	270
Evaluation of furnace refractory linings after sixteen years of producing silicomanganese <i>O'Shaughnessy P. and Roux Le F.</i>	278
Burn down, excavation and relining ENS12 2013/2014 <i>Lindseth A.G., Xayasenh A., Lecacheux B., Cowx P., Dimet A.</i>	300
Advances in waterless cooling for extended refractory campaign life <i>Parravani M., Jastrzebski M., Coull Z., Wasmund B.</i>	308
Monitoring of electrical, thermal and technological processes in ore-thermal electric furnace for the production of high-carbon ferrochrome <i>Kolyvanov S.Y., Savel'ev S., Rubtsovclaim V.V., Kondrashov, V. P., Lykov, A. G.</i>	317
<b>Design and Control</b>	
Temperature profiles in Söderberg electrodes <i>Skjeldestad A., Tangstad M., Lindstad L., Larsen B.</i>	327
Electrode voltage measurement in electric furnaces: analysis of error in measurement and calculation <i>Tracy P., Gerritsen T., Saber F.</i>	338
Electrode controller-leading to energy efficiency <i>Mohanty B.</i>	349
Research of the operation modes of self-baking electrodes of high-power electric ore-smelting furnaces at PJSC “Nikopol FerroAlloy Plant” <i>Grinshpunt A.G., Dedov Yu.B.</i>	358

## TABLE OF CONTENTS

### Volume II:

#### FUNDAMENTALS, THEORY

##### Reductants

Influence of coking process parameters on structural properties of “Direcsil” reductant  
*S. Kim, M. Tolymbekov, V. Kim, N. Lu* 367

Carbon materials for silicomanganese reduction  
*Sethulakshmy Jayakumari and Merete Tangstad* 374

Effect of South African reductants on ferrochrome production  
*Xiaowei Pan* 382

Quartz and carbon black pellets for silicon production  
*Fei Li, Merete Tangstad, Ingeborg Solheim* 390

On the mechanical strength of extrusion briquettes (BREX) for ferroalloy production  
*A.M. Bizhanov, V.Ya.Dashevskii* 402

##### Chromium Fundamentals

Development of new ferroalloys compositions with chromium  
*Zhuchkov V.I., Andreev N.A.* 407

Effect of sulphur at reducing atmosphere on the chromite pellet properties  
*A. Heikkilä, J. Raiskio and T. Fabritius* 414

A novel process to produce chromium ferroalloys by use of solar grade crystalline silicon cutting slurry waste  
*P. W. Han P. X. Chen S.J. Chu L. B. Liu R. Chen* 422

Physical and chemical background of solid-phase obtaining of Fe - Cr ligature by gas-carbothermic reduction  
*Grishin A.M., Simonov V.K., Shcheglova I.S.* 429

##### Manganese Fundamentals

Melting Behaviour of Mn sources - effect on furnace performance  
*Eli Ringdalen, Merete Tangstad, Thomas Brynjulfsen* 436

The comprehensive analysis of physical and chemical properties and metallurgical value of foreign manganese raw materials used during ferroalloy production  
*S.G. Grishchenko, V.V. Krivenko, A.N. Ovcharuk, V.I. Olshansky, I.Yu. Filippov* 446

The study of silicon chemical bond in modeled silicate systems and manganese ores using x-ray photoelectron spectroscopy  
*Gladkikh V. A., Gasik M.I.* 454

Reduction behaviour of manganese ore using methane gas  
*Amit Bhalla and R Hurman Eric* 461

The investigation of phosphorus chemical bond in the manganese-ore materials  
*M.I. Gasik, V.A. Gladkikh* 470

Dissolution of silica in slag in silicomanganese production  
*Samane Maroufi, George Ciezki, Sharif Jahanshahi, Shouyi Sun and Oleg Ostrovski* 479

The thermodynamic studies of silication processes and manganese and silicon carbothermic reduction using system tetraedration method MnO-SiO <sub>2</sub> -CaO-MgO <i>V.S. Kutsin, I.G. Kucher, Yu.B. Dedov, I.I. Kucher, A.V. Ruban</i>	488
The study of magnesium oxide influence on thermophysical and electric properties of ferrosilicon manganese slag <i>V.S. Kutsin, I.G. Kucher, Yu.B. Dedov, V.A. Ruban, I.I. Kucher</i>	493
Research on de-titanium of silicomanganese ferroalloy by blowing N <sub>2</sub> <i>S. J. Chu P. X. Chen S. L. Zeng</i>	497
Tap-hole wear: analysis of daily average slag and metal compositions of a single SiMn smelter <i>J.D. Steenkamp and P.C. Pistorius</i>	505
Activation energy of nitriding 0.23%C ferromanganese <i>S. Ghali, M. Eissa &amp; H. El-Faramawy</i>	511
<b>Ferronickel, Ferrosilicon &amp; Other Alloys Fundamentals</b>	
Reduction of a garnieritic laterite ore by CO-CO <sub>2</sub> gas mixtures <i>J. Yang, G. Zhang, S. Jahanshahi and O. Ostrovski</i>	518
The solubility of carbon in molten iron-nickel-silicon alloy at 1773K and 1823K <i>P.X. Chen S.J. Chu P. W. Han</i>	528
Pretreatment of reductive dephosphorization slags generated in high silicon ferronickel production <i>M.Y.Lu, H.J. Wang, B.Song, S.J Chu</i>	536
Diagram of phase structure of metallic system in liquid state <i>S. Baisanov, Ye. Shabanov, A. Baisanov, A. Issagulov, Ch. Laurent</i>	540
Synthesis of silicon carbide by carbothermal reduction of quartz in H <sub>2</sub> -Ar gas mixtures <i>Xiang Li, Guangqing Zhang, Kai Tang, Oleg Ostrovski and Ragnar Tronstad</i>	548
Researching of thermophysical processes in acheson furnace for the production of silicon carbide <i>I.V. Derevyanko, A.V. Zhadanos</i>	555
Viscosity of SiO <sub>2</sub> -MgO-Al <sub>2</sub> O <sub>3</sub> -FeO Slag for nickel laterite smelting process <i>Lv Xueming, Qiu Jie, Liu Meng, Liu Mei, Lv Xuwei</i>	561
Technology of Obtaining New Generation of Complex Ferroalloy with the Use of Kazakh Barite Ore <i>S. O. Baisanov, V. A. Salina, Z. M. Tokaeva</i>	567
<b>Modelling and Simulation</b>	
Mathematical and computational modelling of MHD effects in entrained droplets of slag and metal <i>Q.G. Reynolds</i>	572
Mathematical models for metallurgical scale-Up <i>S. A. Halvorsen, R. Schlanbusch and S. Shinkevich</i>	588
Modeling of off-gas and particles flow under roff of a closed submerged arc furnace <i>M. Kadkhodabeigi, B. Ravary and D. O. Hjertenes</i>	598
Application of artificial neural network modeling for predicting the ferro alloys furnace output <i>Dr.Rajib Kumar Mohapatra</i>	609
Learning and teaching using process modeling and simulation <i>Xiaowei Pan</i>	619

Life-Cycle impacts and costs of manganese losses and recovery during ferromanganese production <i>L.A. Westfall, M.H. Cramer, J. Davourie, D. McGough and M. Ali</i>	626
Modeling on emulsification of slag and metal in shaking ladle <i>S. Q. Ni, S. J. Chu, J. Zhang<sup>2</sup></i>	636
<b>ENERGY AND ENVIRONMENT</b>	
<b>Energy</b>	
Experience of cogeneration plant design to obtain power and heat in order to decrease ferroalloy manufacture costs <i>V.F.Shevchenko, S.I.Maslennikova, G.D.Kiosev</i>	644
Furnace power supply requirements for a high powered smelting furnace <i>D. Shevchenko, B. Anderson, J. Wikston and L. Kadar</i>	649
Use of ultra-low frequency furnaces for ferroalloys melting <i>P. Kravchenko, S. Balashov, O. Bespalov, D. Malienko, V. Litvyak, D. Blizniuk</i>	658
Energy consumption during HCFeCr production at Ferbasa <i>Eli Ringdalen, Marcelo Rocha, Paulo Figueiredo</i>	668
Operating a DC electric arc furnace on a weak grid challenges and solutions <i>S. Tambe, R. Stadler</i>	676
Industrial demonstration of arc detection in DC arc furnaces <i>C. J. Hockaday, Q. G. Reynolds, D. T. Jordan</i>	682
Etikrom Inc. waste gas heat recovery project and opportunities for Russian ferroalloy smelters <i>Dr. Alparslan Malazgirt, Yavuzhan Kaya</i>	689
The determination of real phase parameters of rectangular six-electrode ore-smelting furnace of type RPZ-63. <i>V.S.Kutsin, V.A.Gladkikh, V.I. Olshansky, I.Yu.Filippov, S.N. Kuzmenko, A.V. Ruban</i>	695
Directions of saving energy resources in the technology of orethermal processes <i>Victor Syvachenko, Victor Yemchytsky, Vadym Nezhuryn</i>	700
<b>Environment</b>	
Dust emission minimizing, measuring and monitoring in FeCr-production in Tornio Works <i>M. Päätaalo, J. Raiskio</i>	703
A novel dry-based system for safe, hygienic energy recovery from ferroalloy furnace exhaust <i>Michael Trovant, Arran McGrath, Mirza Haque</i>	709
Ecological aspects of ferroalloys and silicon metallurgical works – economical solutions <i>C., Fröhling, SMS Group, R., Degel, SMS Group</i>	719
Development and introduction of an innovative technology of exhaust gas purification for manufacture of manganese agglomerate <i>V.V. Osypenko, V.D. Osypenko, S.P. Shuvayev, Iu.I Korkodola</i>	724
Innovative approaches when creating modern environmentally safe and energy efficient ferroalloy productions <i>D. V. Stalinsky, Y. L. Petrov</i>	733

## Recycling

Use and processing of dust of dry gas cleaning of ferrosilicon furnaces  
*Sergey Balashov, Sergey Babko, Leonora Likhobitskaia, Yelizaveta Shyshkina* 738

The development and introduction of resource saving technology of non-standard manganese ferroalloy fines recycling  
*V.S. Kutsin, V.I. Olshansky, I.Yu. Filippov, A.A. Chumakov, V.G. Ganotsky* 745

Design solutions on utilization of ferroalloy fine fractions and metal and slag separation at ferroalloy plant  
*V.F.Shevchenko, S.I.Maslennikova, G.D.Kiosev* 750

Wastes generation and use in ferroalloy production  
*Zhdanov A.V., Zhuchkov V.I., Dashevskiy V.Ya., Leontyev L.I.* 754

Electrolytic manganese from ferroalloy production furnace flying dust  
*J.Sancho, J.C.Sánchez Recio, A.Fuentes, J.Ayala, J.L.Bernardo, C. Rodríguez* 759

## COMMERCIAL ASPECTS

### Markets

Benchmarking in the ferromanganese production processes  
*B Kaelo Sedumedi, Dr Xiaowei Pan* 763

### Applications and Uses

On probable ways of steelmaking and ferroalloy industry development  
*L.B. Medovar, S.G.Grishchenko, G.P. Stovpchenko, A.L. Kukharev, V.K.Granovskii* 772

Steel deoxidation and alloying control model in the converter plant  
*V.S. Bogushevskiy, V.Yu. Sukhenko* 780

Estimate of desulphurizing ability of slags with the use of integral tests which characterises melted slag as a chemically uniform system  
*Kamkina L.V., Togobitskaya D.N. and Sokur Yu.I.* 791
